Smart Clinical Quality & Incident Surveillance System

Integrated OVR Tracking & Automated Drug Reconciliation

Supervised by

Eng. Mohamed Anas

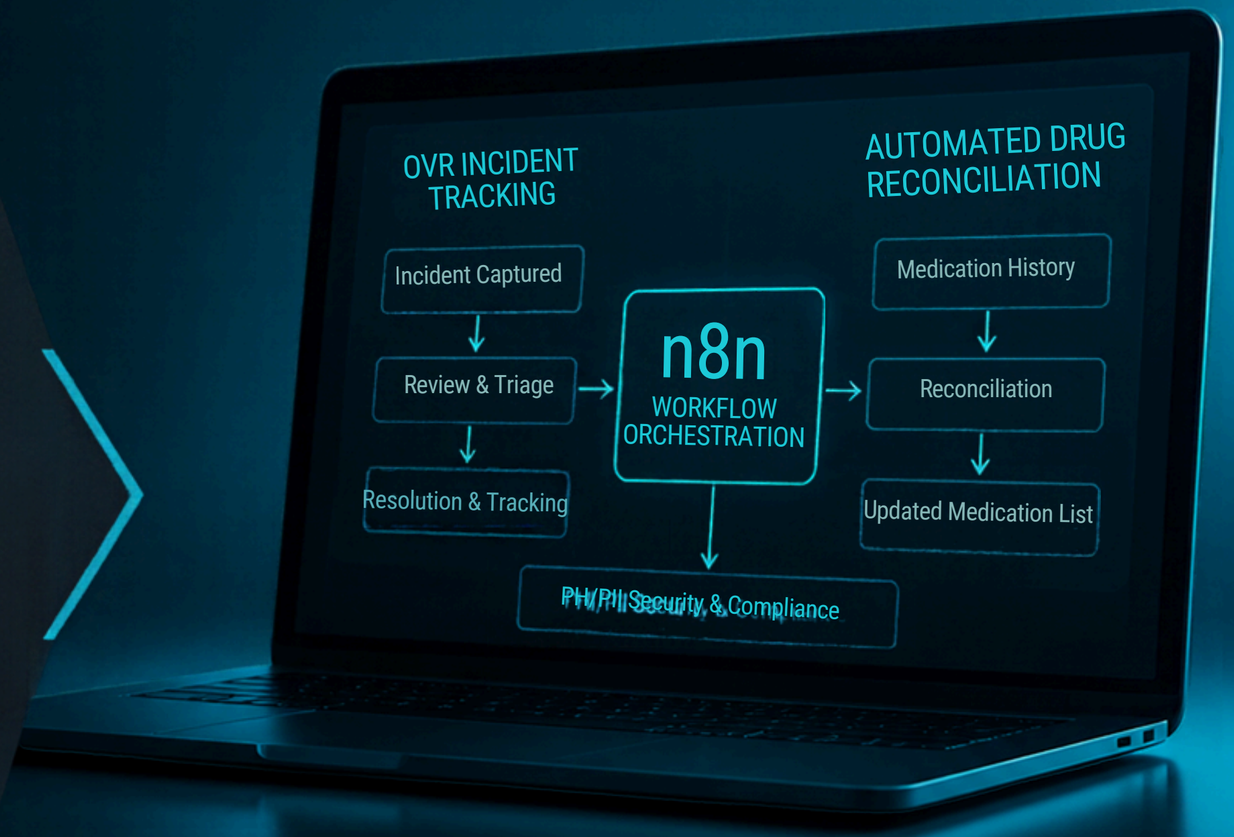
Presented by

Dr. Basma Abdelbaset Elsayed Ma'moun

and Dr. Eman Mostafa Saad Ahmed

Problem Statement & Objective

Transform incident reporting and medication conciliation into faster, safer clinical workflows



Manual processes create delays

Time-consuming incident reporting

Medication conciliation errors

Safety risks and compliance gaps

Automation drives safer outcomes

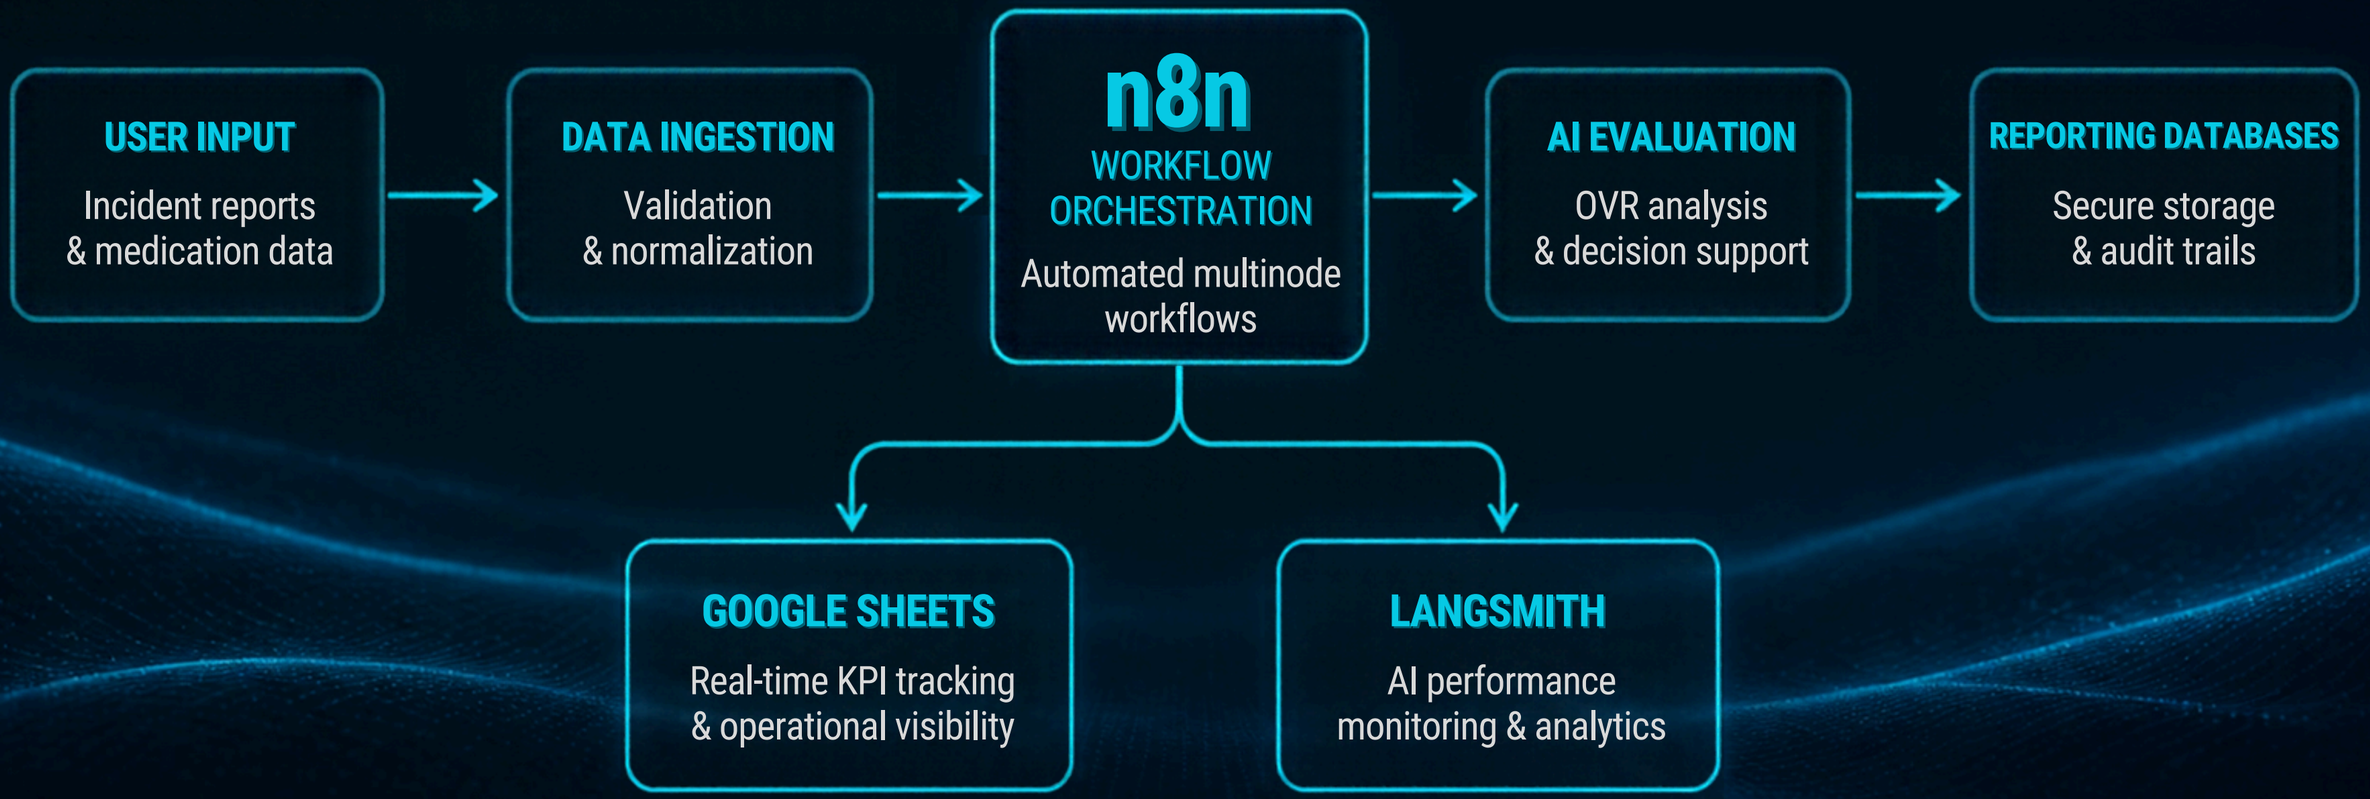
Automated OVR tracking

Accurate, real-time drug conciliation

Faster decisions and improved patient safety

Architecture & Workflow Orchestration

n8n orchestrates multinode workflows
connecting user input, AI evaluation, and reporting
with real-time data integration



Core Modules

OVR INCIDENT SURVEILLANCE

- Automated ingestion of occurrence variance reports
- Severity classification for accurate prioritization
- Intelligent routing for rapid clinical response

DRUG RECONCILIATION

- AI-powered medication safety checks
- Cross reference prescriptions and records
- Detect discrepancies to prevent medication errors

Safety, Privacy & Human-in-the-Loop Review

Protect patient data

Robust safeguards keep sensitive information out of AI models

Ensure clinical oversight

Human review and approval for critical incidents and flagged issues

Strengthen trust

Privacy by design with auditable controls and accountability

Monitoring, Dashboards & Alerts

Real-time system tracking and notification capabilities

Execution details and KPI dashboards from LangSmith & Google Sheets

Automated alerts for critical clinical events and safety variances

Immediate visibility for faster decisions and safer outcomes

Results & Business Value

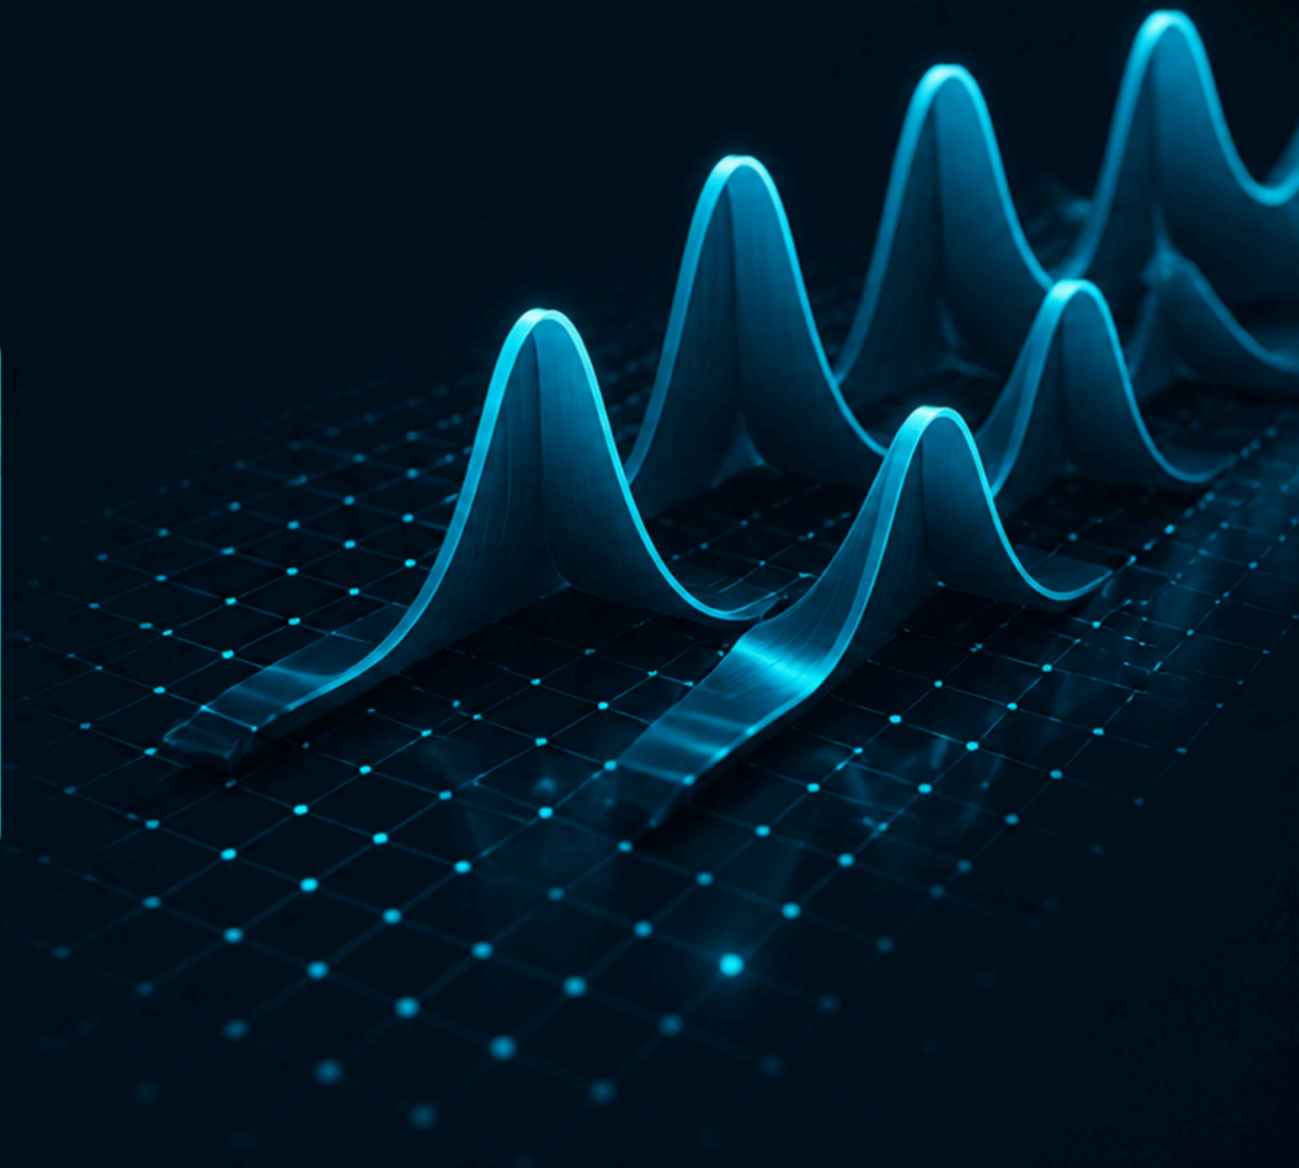
Measurable efficiency gains.
Stronger safety outcomes.

HOURS TO SECONDS

OVR processing and drug reconciliation accelerated

ZERO

Reporting errors eliminated with real-time insights



A Transformative System Advancing Clinical Quality and Patient Safety.
